The kvdefinekeys package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2016/05/16 v1.4

Abstract

Package kvdefinekeys provides \w define keys the same way as keyval's \d However, it works also using ini-TeX.

1 Documentation

1.1 Motivation

\kvsetkeys serves as replacement for keyval's \setkeys. This package adds macros to define keys, closing the gap \kvsetkeys leaves.

```
\label{eq:locality} $$ \left( \langle definition \rangle \right) = \left( \langle definition \rangle \right) $$
```

Macro \kv@define@key reimplements keyval's \define@key. Differences to the original:

- The defined keys also allow \par inside values.
- Shorthands of package babel are supported in family and key names.
- Macro \kv@define@key is made robust if ε -TEX's \protected or LATEX's \DeclareRobustCommand are found.

2 Implementation

2.1 Identification

1 (*package)

```
Reload check, especially if the package is not used with LATEX.

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/kvdefinekeys.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/kvdefinekeys.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

¹http://ctan.org/pkg/kvdefinekeys

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_EX :

```
tex kvdefinekeys.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\label{eq:kvdefinekeys.sty} $$ \text{kvdefinekeys.pdf} $$ \rightarrow \text{doc/latex/oberdiek/kvdefinekeys.pdf}$$ test/kvdefinekeys-test1.tex $$ \rightarrow \text{doc/latex/oberdiek/test/kvdefinekeys-test1.tex}$$ $$ \text{kvdefinekeys.dtx}$$ \rightarrow \text{source/latex/oberdiek/kvdefinekeys.dtx}$$
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

4.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

4.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using \LaTeX for docstrip (really, docstrip does not need \LaTeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{kvdefinekeys.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdfIATEX:

```
pdflatex kvdefinekeys.dtx
makeindex -s gind.ist kvdefinekeys.idx
pdflatex kvdefinekeys.dtx
makeindex -s gind.ist kvdefinekeys.idx
pdflatex kvdefinekeys.dtx
```

5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is kvdefinekeys.xml.

7 History

```
[2010/03/01 v1.0]
```

• First version.

[2010/08/19 v1.1]

Documentation fix, no code change.

[2011/01/30 v1.2]

 $\bullet\,$ Already loaded package files are not input in plain TeX.

[2011/04/07 v1.3]

- Support for package babel's shorthands added.
- \kv@define@key is made robust if available.

[2016/05/16 v1.4]

• Documentation updates.
