The attachfile2 package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2016/05/16 v2.8

Abstract

This package can be used to attach files to a PDF document. It is a further development of Scott Pakin's package attachfile for pdf T_EX . Apart from bug fixes, package attachfile2 adds support for dvips, some new options, gets and writes meta information data about the attached files.

1 Documentation

1.1 Introduction

The PDF format ([3]) allows the inclusion of files inside the PDF document. The included files can be bound to an annotation on a page. Or they can be recorded in a sorted list of embedded files. The packages attachfile or attachfile2 follow the first approach, package embedfile uses the latter method.

1.1.1 Future development

My dream is a large package that merges the features of all these packages meantioned before:

- Files can be attached to a page.
- Files can be attached to the document.
- An easy user interface for simple, common tasks and beginners.
- An interface for the advanced users that want to setup every detail.
- Support of many drivers (pdftex, dvips, dvipdfm, ...).
- ...

However, I have not managed to take the time for this project. Instead:

- First I experimented with package attachfile, adding driver support, fixing bugs, The result is currently named as attachfile2. It uses an external script to get file properties (size, date, checksum, ...).
- In order to avoid an external program for getting basic file properties I provided a patch "EscapeAndOther" for pdfTeX that was accepted for version 1.30.
- Package embedfile closes a gap left by the packages for attaching files and allows the embedding of files to the document. Also it makes use of the new primitives of pdfTFX.

Until this future becomes true, I provide the intermediate step attachfile2 at its current state. There are many things to do:

- Documentation, documentation, ...
- Improving portability of the Perl script pdfatfi.pl (Windows, non-GNU, ...).

- Comfortable program for extracting embeddd files.
- Embedding files to the document, see package embedfile.
- Additionally use feature of pdfTEX 1.30. With a recent pdfTEX the Perl script step is then obsolete.
- GoToE links.
- Layout of PinPush, especially the tip does not scale well.
- Driver for dvipsone, similar to dvips, changes:
 - coordinate transformation need to be fixed here, hdvipson.def contains:

```
/DvipsToPDF { 65781 div } def
/PDFToDvips { 65781 mul } def
```

- Syntax for \special: hdvipson.def contains both \special{! #1} and \special{headertext= #1}. Are bothe the same?
- File name conversion, see PDF specification:

```
c:\somewhere\foobar.txt \rightarrow /c/somewhere/foobar.txt
```

- Option scale for icons?
- Compatibility for plain TEX.
- ToDos for atfidvips.def.

1.2 User interface

Basically this package attachfile2 follows the user interface of package attachfile, look into its documentation ([1]).

1.2.1 New options

- Driver options dvips, pdftex, dvipdfmx and xetex that is an alias for dvipdfmx.
- Option driverfallback specifies a DVI driver if the driver cannot be detected automatically.
- New options final and draft.
- New option scale for scaling the annotation rectangle.
- Options file and nofile for controlling the generation of the auxiliary file .atfi.
- New option ucfilespec for file names with characters outside ASCII (PDF 1.7).

1.2.2 Option color

Package attachfile's option color only understands explicit RGB values as three space separated real numbers in the range from 0 to 1.

This package attachfile2 extends the syntax. The usual color specifications of packages color or xcolor may be used. The latter one requires that package xcolor is loaded. Without package xcolor a limited range of explicit color specifications are supported, the color models rgb and gray (and cmyk if package hyperref's option pdfversion is set to 1.7 or greater.

Example without package xcolor:

```
\documentclass{article}
\usepackage[color={1 0 .5}]{attachfile2}
% Spaces in option values in \usepackage or \documentclass
% must be protected by curly braces. Otherwise LaTeX strips
% the spaces and the package would see `color=10.5'.
% This protection is not necessary for \attachfilesetup.
\attachfilesetup{color=1 0 .5}
\attachfilesetup{color=[rgb]{1,0,.5}}
\attachfilesetup{color=[gray]{.5}}
```

The following example with package **xcolor** shows additional color specifications:

```
\documentclass{article}
\usepackage{xcolor}
\definecolor{attachfilecolor}{cmyk}{.1,.2,.3,.4}
\usepackage{color=red}{attachfile2}
\attachfilesetup{color=red}
\attachfilesetup{color=attachfilecolor}
```

For experts. If the color is used in annotations, the color is converted with the help of package xcolor to RGB. PDF versions 1.7 or later also understand color models Gray and CMYK. The PDF version is detected if the experimental option pdfversion of package hyperref is used, example:

```
\documentclass{article}
\usepackage[pdfversion=1.7]{hyperref}
\usepackage{attachfile2}
```

However, currently only driver pdftex also supports the actual setting of the PDF version in the output PDF file.

1.2.3 Perl script pdfatfi.pl

This package also tries to get and add meta information data, such as file size, file date, checksum, As package embedfile shows the new features of pdfTEX 1.30 are very useful for getting this kind of data. Since version 2.6 these data are used if available.

For older versions of pdfTEX and XTEX the Perl script pdfatfi.pl is provided to get this data. The use of the Perl script is not mandatory. This data can be shown by PDF viewers, but they are not a requirement of the PDF specification.

Package attachfile2 and the Perl script communicate via an auxiliary file with file extension .atfi. The script is used between two LaTeX runs and updates the auxiliary file, example for dvips:

```
latex test
pdfatfi test
latex test
dvips test
ps2pdf test.ps test.pdf
```

1.3 Changes to attachfile

Some of the changes I can remember:

- Support for dvips.
- Support for dvipdfmx/X¬T¬X.
- Setting and filling the /Param entry for files (file date, file size, ...).
- Perl script pdfatfi.pl.

- New options.
- Bug fixes.
- ..

2 Implementation

2.1 Package

- 1 (*package)
- 2 \NeedsTeXFormat{LaTeX2e}
- 3 \ProvidesPackage{attachfile2}%
- 4 [2016/05/16 v2.8 Attach files into PDF (HO)]%

2.1.1 Loading of packages

- 5 \RequirePackage{ifpdf}[2009/04/10]
- 6 \RequirePackage{ifxetex}
- 7 \RequirePackage{ifluatex}[2009/04/10]
- 8 \RequirePackage{keyval}
- 9 \RequirePackage{color}
- 10 \RequirePackage{infwarerr}[2010/04/08]
- 11 \RequirePackage{ltxcmds}[2010/04/26]
- 12 \RequirePackage{kvoptions}[2009/07/21]
- 13 \RequirePackage{pdftexcmds}[2010/04/01]
- 14 \RequirePackage{pdfescape}[2007/11/11]

Package hyperref is needed because of \pdfstringdef.

- 15 \RequirePackage{hyperref}
- 16 \RequirePackage{hycolor}[2008/07/29]

2.1.2 Value checking

\atfi@Match

- 17 \ltx@IfUndefined{pdfmatch}{%
- 18 \def\atfi@Match#1#2#3#4#5{}%

File embedding Most values for Params dictionary found in the .atfi file have priority:

- Recalculation (md5sum, ...) is avoided.
- An external script has more possibilities than programming at PostScript level (operating system, getting the date and time values of the file with correct interpretation.
- Exception: status is called to test file existence, thus we get the value of size for free.

ghostscript:
 created:
              stat.st_ctime
 referenced: stat.st mtime
 stat.st_ctime: interpretion depends on operating system:
            * unix: inode change time (not interesting)
            * win32: probably creation time
                   --> /CreationDate
 stat.st_mtime: modification time --> /ModDate
 time values are seconds since 1970-01-01, GMT
TODO: ghostscript offers "getenv" for getting the value
    of an environment variable. That could be used to
    to detect windows and settingthe /CreationDate entry.
TODO: how are these values interpreted by other distiller
    programs?

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/attachfile2.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/attachfile2.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

3.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TFX:

```
tex attachfile2.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\begin{array}{lll} attachfile2.sty & \rightarrow tex/latex/oberdiek/attachfile2.sty \\ atfi-dvips.def & \rightarrow tex/latex/oberdiek/atfi-dvips.def \\ atfi-pdftex.def & \rightarrow tex/latex/oberdiek/atfi-pdftex.def \\ atfi-dvipdfmx.def & \rightarrow tex/latex/oberdiek/atfi-dvipdfmx.def \\ pdfatfi.pl & \rightarrow scripts/oberdiek/pdfatfi.pl \\ attachfile2.pdf & \rightarrow doc/latex/oberdiek/attachfile2.pdf \\ attachfile2.dtx & \rightarrow source/latex/oberdiek/attachfile2.dtx \\ \end{array}
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

¹http://ctan.org/pkg/attachfile2

3.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

3.5 Script installation

This package comes with a Perl script pdfatfi.pl. Install it somewhere so that it is executed, when it is called as pdfatfi on the command line. Example for installing it under Linux:

```
cp pdfatfi.pl /usr/local/bin/pdfatfi
chmod +x /usr/local/bin/pdfatfi
```

3.6 Some details for the interested

Unpacking with IATEX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{attachfile2.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATFX:

```
pdflatex attachfile2.dtx
makeindex -s gind.ist attachfile2.idx
pdflatex attachfile2.dtx
makeindex -s gind.ist attachfile2.idx
pdflatex attachfile2.dtx
```

4 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is attachfile2.xml.

6 History

[2005/02/23 v2.0]

- New options: draft/final.
- New option scale for scaling the annotation rectangle.
- Supported driver options: pdftex, dvips.
- \bullet Configuration file 'attachfile.cfg' supported.
- Dependency of package calc dropped.
- ε -TEX (\numexpr, \dimexpr) used.
- New auxiliary file \jobname.atfi to get data unavailable by (pdf)TEX, controlled by \nofiles and option nofiles.
- Use of package prokvopt (never released).

[2005/10/07 v2.1]

• Option annotname for naming annotations (this name can be used for embedded go-to actions).

[2006/08/17 v2.2]

- Use of package kvoptions instead of prokvopt.
- DTX framework.
- A little documentation.

[2007/04/11 v2.3]

• Line ends sanitized.

[2008/07/29 v2.4]

• Improved color support. Option color now understands the usual color specifications if package xcolor is loaded.

[2009/09/25 v2.5]

- New option ucfilespec (since PDF 1.7).
- Fix: hyperref's option unicode is disabled for file names except for ucfilespec.

[2010/09/27 v2.6]

- Support for dvipdfmx added, new option dvipdfmx and alias option xetex. (Thanks Will Robertson for pointing to \special{pdf:fstream ...}).
- New option driverfallback.
- All options except driver options are local options, that means they are ignored as global options.
- Some options are disabled after they are used (driver options, draft, final, nofiles).
- Driver files renamed from atfi<driver>.def to atfi-<driver>.def.
- Bug fix: \textattachfile now adds an entry into the .atfi file.
- Program pdfatfi.pl sets modification and creation time with time zone, because the time zone offset might differ with the file date.

[2012/04/18 v2.7]

• Program pdfatfi.pl: Option version added.

[2016/05/16 v2.8]

• Documentation updates.
